using quilting designs by Sharon Perry

Be Careful!!

The size of the pieces in these blocks are quite specific. The small squares are 2" finished and the large squares are 4.5" finished (not 4" as one might expect). That makes the finished block 8.5" finished.

In addition – be careful putting these quilts onto the machine – the blocks are all on point and will stretch (either way) more easily than if they were on straight. Use the channel lock to check they are sitting accurately.

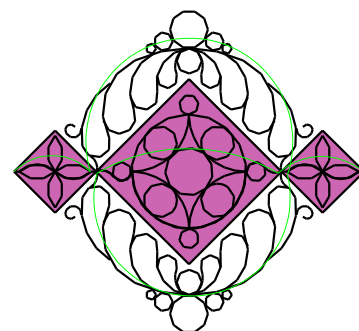

Mix and Match Blocks

For machines which have concatenation available.

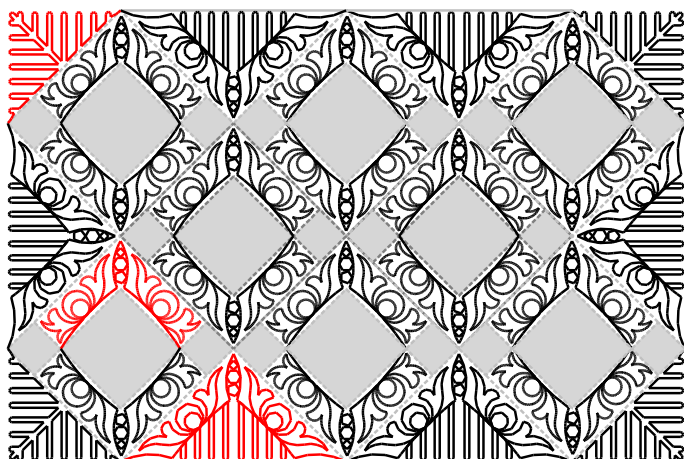

These pattern specific blocks are just for the background areas. The designs in the squares can be whatever one chooses – giving great flexibility.

By using p2p designs the block are placed in the order a,b,b,c,a (as per the diagram to the right) and will quilt continuously. If you continue the series to the next block you will be able to sew out without a restart.

It will take 4/5 'clicks' to place the designs in each block – but you get to place them very accurately. I would suggest placing and quilting just 3 blocks at a time to start with as the fabric will migrate and designs further on may not be accurately positioned if going too far.

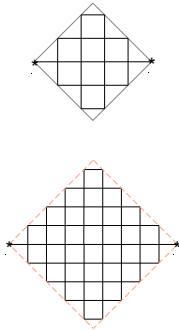

The next page shows how different options in the squares will make the overall effect different, even though the block specific pattern is the same.

Complete Block

For those without concatenation available, or those who want to place the complete block in one go. There is no mix and match available to you – so if you want some other squares in the centre – let me know and I will make it up.
